Volume Contents

NUMBER 1

M. S. Wald	1	Editorial
J. Canelos and **G. Catchen**	3	Testing intellectual skills in engineering; test design methods for learning
E. H. Staiger	13	Profiles of guided design case studies from Jungian typology
P. J. Schmidt	17	Classroom evaluation of alternate manufacturing strategies using computer simulation
L. G. Kraige and **Y. Y. Lin**	21	Motion simulation and utility routine software for use in dynamics courses. Part I: sophomore-level software
W. Pupp and **L. V. Brillhart**	31	An application of computer-aided design in statics
W. P. Boyle	39	Graphical solutions for mechanisms: AutoCAD ™
T. Stathopoulos	43	Educational models for teaching concepts in statics
D. S. Chitore, T. AL-Baldawi and **K. Y. Tahir**	49	CAI package for operational amplifiers: design and implementation
H. R. Baxter	55	Using FORMULA ONE and the IBM/PC for problem solving in electronics
J. L. McCurdy and **J. B. Miles**	63	Digital control for non-electrical engineering students
N. Pliskin and **A. Redlich**	75	High level programming for instructional robots: a challenge for engineering education
D. Hergert	83	A closed loop PID control program for process control
K. J. Scoles	89	Two dimensional thermal modeling for microelectronics
D. R. Xu	93	The application of microcomputers in logic simulation of digital circuits teaching
M. A. Reuter	97	Computer simulation for teaching unit operations
J. P. Monfort and **J. S. Condoret**	105	A computer aided laboratory experiment in a chemical engineering lab session
F. F. Ling	109	The development of a coconut shell opener as a design project
M. Issa and **K. Ramadan**	115	Design and performance of a supersonic nozzle
Y. T. Lam and **P. C. Goh**	121	An industrial attachment programme for civil engineering students
	127	Erratum
	129	Announcement
	I	Software Survey Section

NUMBER 2

M. S. Wald	131	Editorial
H. K. Messerle and **Z. J. Pudlowski**	133	Editorial
Sir M. Finniston, T. V. Duggan and **J. M. Bement**	135	Integrated engineering and its influence on the future of engineering education in the U.K.

V. Subbarao and **T. W. Cole**	147	A technological future?—Educating Australia
H. K. Messerle	155	The role of engineering disciplines and branches in an advancing technology
B. Cunnington	165	Invention, engineering and entrepreneurship: the development and support of Australian innovation
S. Beder	173	Towards a more representative engineering education
W. A. Woods and **M. A. A. Nazha**	183	A turbo-jet engine simulation for design point studies in aircraft propulsion
M. A. Taylor and **H. Yee**	199	A PC-based configurable process control simulator
M. A. P. Taylor, K. W. Ogden and **W. Young**	209	Teaching engineering management and transport engineering with PC-based systems
D. G. Wong	221	'Programmable logic design'—the application of programmable logic devices to teaching digital systems design
J. Fulcher	229	Laboratory support for the teaching of computer architecture
D. Muster and **F. Mistree**	239	Engineering design as it moves from an art towards a science: its impact on the education process
G. W. Heinke and **H. H. Weihs**	247	Continuing education for engineers in Canada
W. Resnick	255	The role and mission of the university in continuing engineering education
L. E. Sissom	263	Advancing technology through university/industry interaction
W. E. Mathieson and **H. J. B. Corderoy**	275	Women in engineering courses
J. G. Sekhon	285	PhD education: attitude survey of employers and PhD graduates in industry and commerce
R. K. Duggins	297	Educating professional engineers for the armed services: a comparison of western defence academies
H. K. Messerle and **Z. J. Pudlowski**	305	An overview of educational research and developments in the School of Electrical Engineering
	I	Software Survey Section

NUMBER 3

M. S. Wald	317	Editorial
L. J. Van Poolen	319	A philosophical perspective on technological design
M. N. A. Hawlader and **A. N. Poo**	331	Development of creative and innovative talents of students
R. Latorre and **K. Hongo**	341	Relevant features from the benchmark period of Japanese engineering education (1866–1900)
J. E. E. Sharpe, W. A. Woods and **A. J. Adey**	351	Selected studies in engineering—a new multi-disciplinary course with industrial participation
B. K. Hodge	361	A microcomputer-based introductory compressible flow course
C. S. Slater, H. C. Hollein, P. P. Antonecchia, L. S. Mazzella and **J. D. Paccione**	369	Laboratory experiences in membrane separation processes
P. J. Pritchard and **M. Bishop**	379	Correction to the ideal gas Helmholtz free energy
R. F. Davey	383	Custom software for design education: an aeronautics example
J. Piecha	391	The multilevel model for microcomputer ICAI systems
R. J. Simpson and **M. R. Varley**	395	Digital filtering using the Motorola DSP56000/01: a laboratory based case study

K. J. Heng and **J. C. Even, Jr**	403	A vision system for quality control
B. C. Rogers	411	Control exercises in the time domain
Y. T. Lam and **P. C. Goh**	421	Education in Singapore with reference to engineering
	I	Software Survey Section

NUMBER 4

A. L. Tilmans	423	Editorial
R. Latorre, M. Inaba and **H. Ohashi**	425	Developments in mechanical engineering education at the University of Tokyo (1986–1988)
R. Lambrech	435	Intensive French language training for engineers
C. O. Smith	441	A year-long sequence in product design
C. Douthwaite	445	Three dimensional modelling in the engine room
G. Miller and **W. Hyman**	451	Undergraduate bioengineering student design projects applied to real world problems for the handicapped
S. K. Vajpayee and **A. E. Leybourne III**	457	Early experiences with our new manufacturing technology master's program
L. G. Kraige and **Y.-Y. Lin**	463	Motion simulation and utility routine software for use in dynamics courses part II: Upper undergraduate/graduate-level software
H. Adeli and **Y. Chen**	471	Microcomputer graphics in teaching mechanics of materials
M. E. Hanyak, Jr. and **P. L. Jannuzzi**	477	BUTS, a user-friendly thermodynamic calculator
J. A. Gallian	503	Check digit methods
C. O. Benjamin, N. B. Yunus, D. L. Babcock and **J. Kincaid**	507	A knowledge-based pedagogical system for project management
P. Krishnan and **T. R. Bolin**	515	Computer aided design of V-belt drives with two sheaves
E. F. Owen, M. J. Mogharrab and **N. Coe**	527	A computer automated electronic design and test work station
	533	Announcement: CATS '90
	534	Announcement: ICCAL '90
	I	Software Survey Section

NUMBER 5

M. S. Wald	535	Editorial
R. A. Kenyon	537	Microelectronic engineering education: a university/industry/government partnership
S. M. Mahmud and **J. J. McMillan**	545	A technique to teach a microprogram controlled computer with instruction pipeline
R. Roth	565	On constructing free-body diagrams
W. A. Ross	571	Enhancing visualization of object geometry with interactive solids modeling
E. Tunstel and **N. Vira**	577	An interactive program for symbolic kinematic solution of industrial robots

Leong Kah Fai	587	Multi-disciplinary design project for engineering designers
J. T. Sommerfeld	593	Research rankings from literature publications
J.-Y. Day and **R. S. Kapner**	601	Computerized fixed bed/fluidized bed laboratory experiment
P. Raghavan and **R. Natarajan**	607	First- and second-law analysis of the reheat-steam power cycle
S. Ferguson and **M. Aburdene**	621	BUCOP: user interface management in computer-aided design of control systems
	I	Software Survey Section

NUMBER 6

M. S. Wald	639	Editorial
H. K. Messerle and **Z. J. Pudlowski**	641	Editorial
W. A. Woods	643	Priorities in engineering education for advancing technology
D. W. Watts	651	Technology education for 21st century needs
T. W. Cole	657	Tradition versus change in Australian higher education
B. Z. de Ferranti	663	Information technology's impact on engineers' education
P. Miller	667	Chaos
P. T. Nicholson	669	Impact of new technologies on co-operation between education and industry
A. Melezinek	671	A model for educational training of technical teachers
Z. J. Pudlowski	675	Important methodological aspects of engineering training
S. Waks	681	Role of universities in research and development of education in a high-tech environment
T. V. Duggan	687	Future international cooperation in engineering education
M. S. Wald	691	Future international cooperation in engineering education II
A. Ahmed and **C. Ostowari**	693	New flow analogues for instruction in aerospace engineering
B. J. Cory and **D. L. Frostick**	703	The integrated formation of engineers—The Imperial College initiative
D. G. Elms	711	Wisdom engineering—The methodology of versatility
F. Landis	719	Issues and trends in U.S. continuing engineering education
M. Mela and J. Turunen	727	Systems thinking—A challenge for engineering education
A. Y. C. Nee and **C. C. Hang**	737	CAE/CAD/CAM research collaboration with industry—Experience at the National University of Singapore
K. Rochford, A. P. Fairall, A. Irving and **P. Hurly**	741	Academic failure and spatial visualization handicap of undergraduate engineering students
H. S. Wragge	751	Engineering education—Where are we going?
T. V. Duggan	753	How technology will change engineering education
Z. J. Pudlowski and **H. K. Messerle**	759	Achievements of the Sydney Conference on Engineering Education
	I	Software Survey Section
